

Glow Privacy Policy Effective Date: May 2026

Glow is built with a "Privacy-First" architecture. We do not collect, store, or transmit any personal data.

1. Data Collection: The app uses the device camera to measure pupil reflex speeds. No visual data (photos or videos) are recorded or saved.
2. Data Storage: All check-in history, notes, and calculated fatigue scores are stored locally on the device using Room Database. They are NEVER uploaded to any cloud server.
3. Data Sharing: The only way data leaves the device is if the user explicitly clicks "Export PDF" and manually chooses to share the file via email or messaging apps.
4. Internet: Glow operates 100% offline. No internet connection is required, and no background data is ever transmitted.
